to build droids like...

R7-S1

Are there standardized Plans?

Over the years the club has gathered detailed information from Star Wars exhibits, photos and actual screen used props to generate a full set of blueprints that are extremely accurate to use as a guideline to construct their droids.

Having standardized plans ensures that all parts will fit together.

Are there any builders near me?

Regardless of your location, other builders are always willing to answer your questions and offer advice. Some are lucky enough to have other builders in their area and often meet to compare droids. Builders also gather at Sci-Fi conventions like the Star Wars Celebrations and Dragon Con.

At Celebration III, over 50 fan built Astromech droids were on display. George Lucas himself stopped in to pay them a visit and inspect their droids.

Who are we?

Founded in 1999
by Dave Everett, The
R2-D2 Builders Club
is an internet fan
based club with over 5000 members world-
wide. Using the web as a common means to
gather information and share thoughts and
ideas with one common goal... to build their
very own life size R-Series astromech.

What is it made out of and how much does it cost?

Droids have been built from wood, plastic,
metal and fiberglass. There is more than one
way to build a droid. Anyone with basic wood
working skills and some determination can
build a droid. It's all determined by what you
have available and what materials your com-
fortable working with.

A droids cost depends on the builder. Some
have been built for as little as \$500 to as much
as \$40,000.00 depending on how much of the
work you do yourself and what you want your
droid to do.

What can an Astromech Droid do?

The answer to this is simple... Whatever you
want it to do (well... pretty much). Many
builders begin with a static droid for their home
or office. Others have designed their droids to
be remote controlled with lights and sounds for
RC fun at fan conventions and fan gatherings.

You can go all out with the bells and whistles...
add a rotating dome,
working periscope, life form
scanner and retractable
center leg.

The full extent of this
project is totally up to
the builder and often
times the project
continues to grow as
the builder gains
experience and
knowledge.

Can I buy a complete R2-D2?

No. We are a club
based on people
looking to build their very own Astromech
Droid. You can however, purchase different
droid parts from club members which are
offered during part runs which will assist you in
your building efforts. Official club parts are
created from the club blueprints.
